

GettaGripOn™ Knife Handgrip

The upright attachable handgrip for knives

THE PROBLEM:

Household knives can be difficult and unsafe to use by people with reduced wrist and hand strength or control. Upright handled knives exist, but these single-purpose knives are expensive, and several would be required to serve the various kitchen needs. Further, most households already have several treasured knives on hand - at least one for each function.

THE SOLUTION: THE GETTAGRIPON™

The GettaGripOn™ upright handgrip attaches to almost any kitchen cutting knife. Its ergonomically designed grip allows people to hold knives more naturally, providing more control and strength yet requiring less force to cut.

HOW IT WORKS:

1. Open the GettaGripOn™ like a nutcracker
2. Place knife handle on the GettaGripOn™, with the grip's forward part closing on the blade, the rest closing on the knife handle
3. Clamp closed until it clicks shut
4. To remove the knife, press the red clip

FEATURES:

- » Ergonomic "upgrip" design attaches to most knives
- » Only one hand needed to attach and use it
- » Allows for safer and more efficient cutting
- » Tested
- » Patents pending
